SUMMARY

Product leader with 15+ years building products where stories get made, told and lived: Head of Product at Bookmate (13M users) and at written.app, a publishing platform I co-founded (40k+ users; author sign-ups grew from ~10 to 1,000–2,000 a month). Technical depth that is rare in a product role: led data and ML teams, made architecture and vendor decisions, and build my own tools in Python. A people-first leader across 10+ countries and 9+ time zones, known for giving teams room to own their work. Moving into creative tech, gamedev, VFX and immersive studios, and story platforms; I make interactive, real-time worlds in TouchDesigner.

PROFILE

Education: MSc in Information Technologies (cybernetics, digital signal processing for medical equipment), MEPhI, 2016 · Specialist degree (5 years) in Documentation and Technotronic Archives, Russian State University for the Humanities, 2009

Certifications: TouchDesigner Operation Foundations (The Interactive & Immersive HQ, 2025) · JLPT N3 (2026) · altMBA (Akimbo, 2025) · Certified Agile Professional (ICAgile, 2013)

Creative tech: TouchDesigner (interactive, real-time visuals) · Unreal Engine (learning) · Python

Product types: Two-sided marketplaces · Creator economy · Subscriptions · Platforms & APIs · AI & ML · Data & analytics · SaaS

Platforms: Web · Desktop · iOS · Android · Smart TV · Smart speakers · IoT devices · Internal tools · APIs & integrations

Domains: Publishing & media · Subscriptions · Retail & logistics · Healthcare IT · Telecom · B2C and B2B

Languages: English C2 · French C1 · Japanese JLPT N3 (N2 in progress) · Italian B1 · Spanish B1

EXPERIENCE

written.app — Head of Product · Feb 2024 – Present | Remote

Co-founded Written and lead its product: a direct-to-reader publishing platform where authors self-publish for free, get paid instantly and earn up to 90% on each sale, while readers buy limited or unlimited editions and can resell them (authors earn 20% on every resale). From zero to open beta in mid-2025; now 40k+ users, 18k+ authors and 4.5k+ published books. Much of the work is creator-economy design: how authors own their work, set prices, get paid and build an audience, and how stories get found and read.

- Shipped the open beta MVP, built around a creator-economy model I designed as part of the founding team: limited and unlimited editions, a resale market with a 20% author royalty, 90% royalties on direct sales, instant payouts and donations for fanfiction authors, plus iOS and Android reading apps, author profiles, a social feed and onboarding
- Grew author sign-ups from ~10 to 1,000–2,000 a month with the marketing team, including a redesign of author registration that removed friction from the first step
- Lead a cross-functional team of 20+ (backend, frontend, iOS, Android, analytics, QA, DevOps, support) and align the roadmap with 10–12 business stakeholders
- Built two AI agents: one runs cold outreach to authors; the other reads contest manuscripts the way an editor would, mapping story structure, craft and integrity, so author contests run faster and bring in more authors
- Built an in-house analytics stack (CSV exports into static, SQL-backed dashboards with DuckDB and Plotly); shipped 15+ dashboards, then handed it over to the analytics team
- Lead technical partnerships (Stripe, Coinflow, Turnkey, ElevenLabs), own the tech budget, and run hiring and onboarding for the tech team

Bookmate — Head of Product · Jan 2022 – Feb 2024 | Remote

Subscription reading platform with 13M users and 20k+ publisher partners across Latin America, Northern Europe and the Balkans. Joined as Head of Product; as the company became more product-led, the title changed to Managing Director in mid-2023.

Started with 5 product managers and a 6-person data and ML team. In mid-2023 the scope grew to engineering, data and analytics, QA, support and user communications (~70% of company operations): 13 direct reports, partial P&L, 9 C-level stakeholders, reporting to the CEO.

- ML-enhanced recommendations raised reading retention to ~80%
- A hypothesis-tested churn model cut attrition by 5% across all markets
- Brought game design into a reading app: an achievements programme that rewarded reading and grew the active user base by 10%
- Pricing experiments and engagement campaigns lifted conversion and engagement by ~4%
- Delivery changes cut key project shipping time by 30%
- Product work for connected devices: smart TVs, smartwatches and smart speakers

Freelance — Product Consultant · Aug 2019 – Feb 2022 | Remote

A deliberate consulting phase between full-time roles. Main engagement: returned to winPharma (former employer) as a trusted consultant to help launch winAutopilote, an automated pharmacy ordering tool for French-speaking markets. The product saves pharmacists up to 8 hours per week and ~€7,000 in treasury per pharmacy. Managed alpha-testing programs, conducted extensive user interviews, and ran the full feedback loop from early adopters through stable release.

Also delivered: designed, prototyped, and launched a web-based workforce optimisation tracker from zero to deployment in 2 months.

Lamoda — Product Development Lead · May 2018 – Aug 2019
Lamoda is a major fashion e-commerce platform, then part of Global Fashion Group with 4–5M active customers across CIS.

Brought in to establish a product function for logistics and delivery IT that did not yet exist. Logistics IT had been run as a project backlog: no product ownership, no prioritisation, no clear rationale behind what was being built. Built the function from scratch, defined the vision for what the supply chain actually needed, hired and led a team of 4 PMs, and established roadmap processes across last-mile delivery apps, warehouse management systems, supply chain tooling, and delivery partner integrations, with ~20 C-level and senior stakeholders.

- Integrated an external delivery partner network through product-led tooling: ~$47K more revenue a month
- Led product development for logistics integrations with major international brands, including Inditex and Calzedonia
- Delivered Datamatrix code scanning at every customer delivery touchpoint (pick-up points and door-to-door), enabling item-level authenticity verification at the point of handoff
- Acted as primary integration architect for logistics IT: designed cross-system data flows and pipelines feeding into Oracle BI, enabling reporting across the full supply chain
- Co-built a senior leadership reporting system with the business information department, consolidating all internal systems into a customisable dashboard with ML-driven forecasting, anomaly detection, and OKR metrics tracking
- Supported warehouse automation projects: integrating logistics IT with robotic conveyor and sorting systems

Home Credit Bank — Senior Product Manager · Dec 2017 – May 2018 | Remote
Conversion optimisation and digital product redesign: product pages, conversion flows and interactive financial calculators. The website became the company's top-performing sales channel: ~5,000 daily visits within days of launch, 2–5% conversion.

Netcracker — Technical Manager · Dec 2016 – Nov 2017 | Remote
Netcracker (a NEC subsidiary) is a global telecom software and services company. Managed delivery and technical support across an international enterprise client portfolio: Telecom Austria, Telefónica Global Solutions, Telecom Italia, Orange IPON, GVA Canal+.

- Took over a delayed multi-year delivery and got it back on track
- Defined product vision and roadmaps for key stakeholders; planned pre-sale effort estimates, risk assessments and delivery plans

winPharma — System Analyst → Product Manager · Nov 2008 – Dec 2016
winPharma is a French software company serving the pharmacy industry. Joined as a System Analyst in 2008: gathering requirements, working directly with pharmacist users, and translating user problems for development teams. Grew into full product ownership, with a web development team I hired and built for the platform relaunch. All work conducted in French across a B2B SaaS environment.

- Relaunched winpharmacie.com on a new tech stack: a single-page B2B application that lets pharmacists manage patient contact and prepare orders 50% faster
- Relaunched winTeam: a web-based internal social network for pharmacy staff, with group ordering and team communication
- Grew product sales by ~5% through user community building and data-driven product experiments
- Supported pharmacy automation projects: electronic shelf labels, digital signage, automated pill-packaging machines and robotic stock systems

SKILLS

Strategy & discovery: product strategy, product vision, roadmaps, market and competitor research, customer research, JTBD, continuous discovery, go-to-market and product marketing

Delivery: 0-to-1 product launches, technical program management, Agile / Scrum, prioritisation frameworks (RICE, MoSCoW, Kano, WSJF), risk management, launches and rollouts, technical writing (PRDs, specs), scope and capacity planning, vendor and contractor management

Data & analytics: SQL, pandas, NumPy, Matplotlib, scikit-learn, data pipelines, data infrastructure, North Star and AARRR metrics, A/B experiment design, data visualisation

Technical: system design, REST APIs, Git, Python, AI agents and MCP, interactive prototypes, QA and test planning, databases (SQL and NoSQL)

Business & finance: P&L, unit economics, LTV / CAC, pricing, revenue scaling, board-level reporting, tech budget and cost management

People & teams: distributed teams, cross-cultural communication, stakeholder management, negotiation, conflict resolution, hiring and mentoring, onboarding, workshop facilitation, public speaking

Tools: Jira, Confluence, Notion, Coda, Linear, Asana, GitBook, Obsidian, Figma, FigJam, Miro, Framer, Webflow, Amplitude, Mixpanel, PostHog, GA4, Tableau, Looker, Metabase, Oracle BI, Excel (advanced), Jupyter, PostgreSQL, BigQuery, Firebase, Optimizely, Maze, Dovetail, Typeform, Mailchimp, Qase, Postman, Fiddler, AWS, Claude Code
